Notes	1938

## PREFACE

With the publication of this Systematic Concordance of the Egyptian Coffin texts as published by De Buck<sup>1</sup> it is appropriate to explain my aims and methods which resulted in the present framework. For a final analysis of the texts, De Buck's original publication is indispensable, as hieroglyphs may be romanized according to interpretation in different ways.

My aim has been to enable the general public to have an easy and effective entry to this important branch of ancient Egyptian literature. These texts are not only unique in their religious scope, but also in their position in the development of the grammar of the ancient Egyptian language. The size of the corpus provided by De Buck and my wish to provide Egyptologists, theologians and others who want to use my references as soon as possible to study this literature, prevented me from including those coffin texts which are published by other editors. Rooted in tradition, my work aims to be a useful instrument, compatible with recent and forthcoming developments in Egyptology.

The work is divided into 3 parts, complemented by an index:

- 1 The analytical concordance of the verb; the various readings of each lemma are provided in romanization, divided into the morphological categories of the verb; within each category the verbs are treated in alphabetical order.

A purely alphabetical approach of transliterated forms, although enabling the use of electronic databases, was rejected as it would result in the combination of huge amounts of information without internal cohesion, resulting in a complete loss of survey. Connected paradigms would become disconnected. As many expressions always occur in the same grammatical form of a verb, I choose an analytical classification according to verbal

---

<sup>1</sup> Adriaan de Buck. *The Egyptian Coffin Texts*. Chicago, 1935-1961. 7 vols.

forms, resulting in smaller and easier to survey clusters. Connections can be discerned at a glance. Because of the inconsequent use of determinatives in the texts resulting in uncertainty regarding their exact signification, homonyms are not individually distinguished.

Classification is fluent: the same examples may be repeated in various classes as it is often impossible to restrict the use of a certain example to a unique form of a verb. Thus to a certain extent overlap is unavoidable.

The nomenclature of verbal categories in the Concordance is self-evident and in keeping with the use of H.J. Polotsky. The so-called “Edel-form” is named after Elmar Edel, *Altägyptische Grammatik*, § 511. Roma, 1955-1964.

- 2 Negations; categories and order as in part 1.
- 3 An analytical study of the sentence in the Coffin Texts; an index for the sentences in the order of De Buck's corpus.<sup>2</sup>
- 4 An alphabetical index (vocabulary) to parts 1-3.

Proper understanding of literary texts should precede theoretical analysis; this concordance and its companion, the hieroglyphic dictionary, are the result of my comprehensive reading and indexing of the corpus published by De Buck. During the process I became conscious of a curious phenomenon: grammar studies of ancient Egyptian are mostly restricted to description and do not (or insufficiently) acknowledge any relation between morphology and signification in these sacral and magical spells. In Egyptology it is accepted practice to study a text with a clear content from which the grammatical categories are described and explained, especially the formations of the verb.

The concordance, following accepted grammar, ignores the eventual semantical differences in morphological variants and homonyms.

---

<sup>2</sup> The term “sentences without verbs” has been substituted for the traditional “nominal sentence” because in my opinion the use of the latter in Egyptian is highly questionable.

In the process I gradually became convinced of the inevitability of a reassessment of the validity of the classification that I used.

The autonomous corpus of the Coffin Texts has a strong, but far from uniform foundation in Egyptian thought and by studying it we can gain a much better insight into the formula of these sacral and magical spells. Restricted to the context of a single text without any variant, the traditional approach may render acceptable results. The Coffin Texts occur in variant readings that often show different verbal formations in an identical context. The pattern of apparently functional variant readings of the spell urges us to investigate the relevance of these morphological verbal differences for our understanding of Egyptian grammar. Probably we should reassess our opinions on the relation between morphology and signification within a given context.

As linguistics show order and relative simplicity in the written representation of literary texts in general, the magic and sacral character of spells may presuppose a quite strict adherence to orthography. Until now we silently accepted written texts as phonetic representations of spoken language, abandoning phenomena as body language and intonation which are important companions to human verbal communication. As is common in other languages, e.g. English and Danish, Egyptian orthography may contain elements which are ignored in pronunciation, as well as references to body language and gesticulation. Gesticulation is rather an essential part of spoken language than a kind of determinative after the words have been uttered; it so is an essential part of the communication between individuals and could leave traces in written language.<sup>3</sup>

---

<sup>3</sup> These questions will be discussed in my forthcoming study of Egyptian Grammar: *Morphology, Verb and Syntax*.

An example of a probably unspoken character is the *r* in the geminating class, where it appears to occur with an almost absurd lack of rule, but at all occasions as part of orthography; from this the question rises if the written character *r* (and other characters as well) were always pronounced, or were occasionally omitted in spoken Egyptian. My study of cuneiform Sumerian and Akkadian texts showed me that the Sumerian character *r* does not always occur where it may be expected, an interesting parallel between Egyptian and Semitic languages.

The completion of the Concordance marks the second stage in the publication of my Coffin Text Studies as announced in my paper, delivered at the Symposium held on the Occasion of the 100th Birthday of Adriaan de Buck. Leiden, 17-19 December 1992 (not included in the Proceedings). It was preceded by the publication of a dictionary<sup>4</sup> and will be finalized by the publication of my studies in Egyptian grammar: *Morphology, Verb and Syntax – a Reassessment*. My post-graduate studies and research were not formally or informally incorporated in or related to any academic institution or organization. I chose to adhere to traditional treatment of the coffin texts, but at the same time to allow for testing new personal methods and ideas.

### ACKNOWLEDGMENTS

First I want to thank the late Professor Hans Jacob Polotsky of the Hebrew University in Jerusalem who introduced me to the world of Egyptology and instigated the compilation of this concordance. He explicitly urged me to enter syntax studies disregarding his own theories on the “*second tenses*”.

I wish to express my sincere appreciation to my dear friends Aviva and Abraham Rosenberg for their hospitality and their efforts to confront me with reality, and to induce me to marshal the torrent of my data and theories.

My appreciation also includes Brill Academic Publishers of Leiden who agreed to the almost obsolete, but for practical reasons in Egyptology still indispensable practice of handwritten works of reference.

I am grateful that my independence of academic institutions and organizations allowed me freedom of thought in my analysis of the

---

Another element of hieroglyphic script which is apparently indiscriminately used is the so-called stroke-determinative, a sign which also renders the dualis, the plural and sometimes even the suffix for the first person singular. The sign is a central phenomenon in hieroglyph texts; comparing all its occurrences in the Coffin Texts suggested to me a common denominator: a gesture, pointing to something in the vicinity of the speaker.

<sup>4</sup> Rami van der Molen. *A Hieroglyphic Dictionary of Egyptian Coffin Texts*. Leiden, E.J. Brill, 2000. (Probleme der Ägyptologie, nr. 15)

Coffin texts according to the traditional method, but at the same time allowed the development of new and personal methods and ideas for my philological research.

Zuidlaren, November 2004  
The Netherlands

## SIGNS

- At the beginning of a sentence: preceding part of the sentence omitted.
- In the middle of a sentence: part of the sentence skipped.
- At the end of a sentence: the sentence continues.
